Operational Data (Entire System)

Note: Values are listed in DC Amps and AC KVA. Use KVA to calculate primary AC amps as required.

FLA:	5800 DC Amps (4704 KVA)
Empty Mill Starting Current:	1740 DC Amps (1412 KVA)
Average Running Current:	4930 DC Amps (3998 KVA)
Maximum Potential Overload:	8120 DC Amps (6586 KVA)*
Average Power Factor:	0.90**
Voltage Tolerance:	+/- 10%

*Maximum overload allowed for 60 continuous seconds once every 15 minutes.

**DC motor power factor is directly proportional to RPM of the machine. Power Factor is dependent on operation of the machine.

System is available as 12 pulse or 24 pulse (as listed) designs. Design type is chosen with completion of power study.

About Quad Plus

Quad Plus provides industrial control systems, solutions, and services. We offer an uncompromising level of service and expertise to maintain our customers' productivity. Our extensive process knowledge spans from the utility pole to the motor shaft. With an on-going commitment to follow-up service, parts, and repairs, we are all you need for continued success.

We are recognized in the field as a leader in drive and motor control. Solutions are designed in-house through research and development tailored to meet each client's specific needs. Our design staff includes electrical, mechanical, civil/structural, chemical, and controls.
